

REPORT Small Wind 2013

Onshore register A

Below we present a summary of the plants allowed to register for 2013 onshore (A) that have power over 60kW and below 5 MW.

These plants have been accepted but not necessarily be made and who would benefit from feed-in tariff of € 0.268 / kWh within the 200kW and 0.149 € / kWh by 1 MW for 20 years.

We do not address the larger sizes because they are not part of the machines that we monitor in our report.

We have divided into 3 basic classes of power

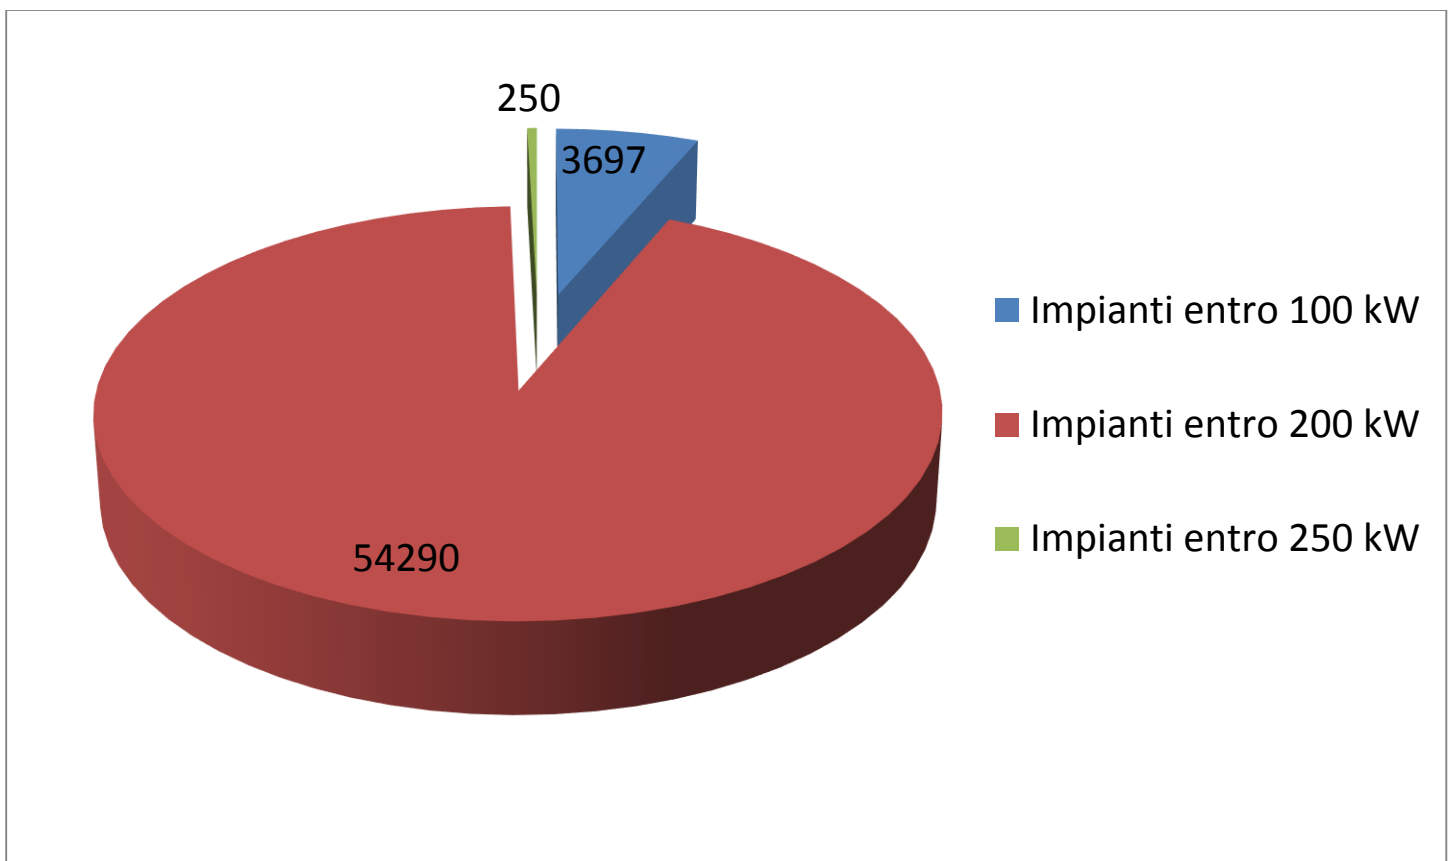

A further graph does also include the number of machines.

For clarification, plants could be composed of multiple machines of lower power and not necessarily from a single machine.

We also did a further breakdown by region in order to highlight the growth from the previous report.

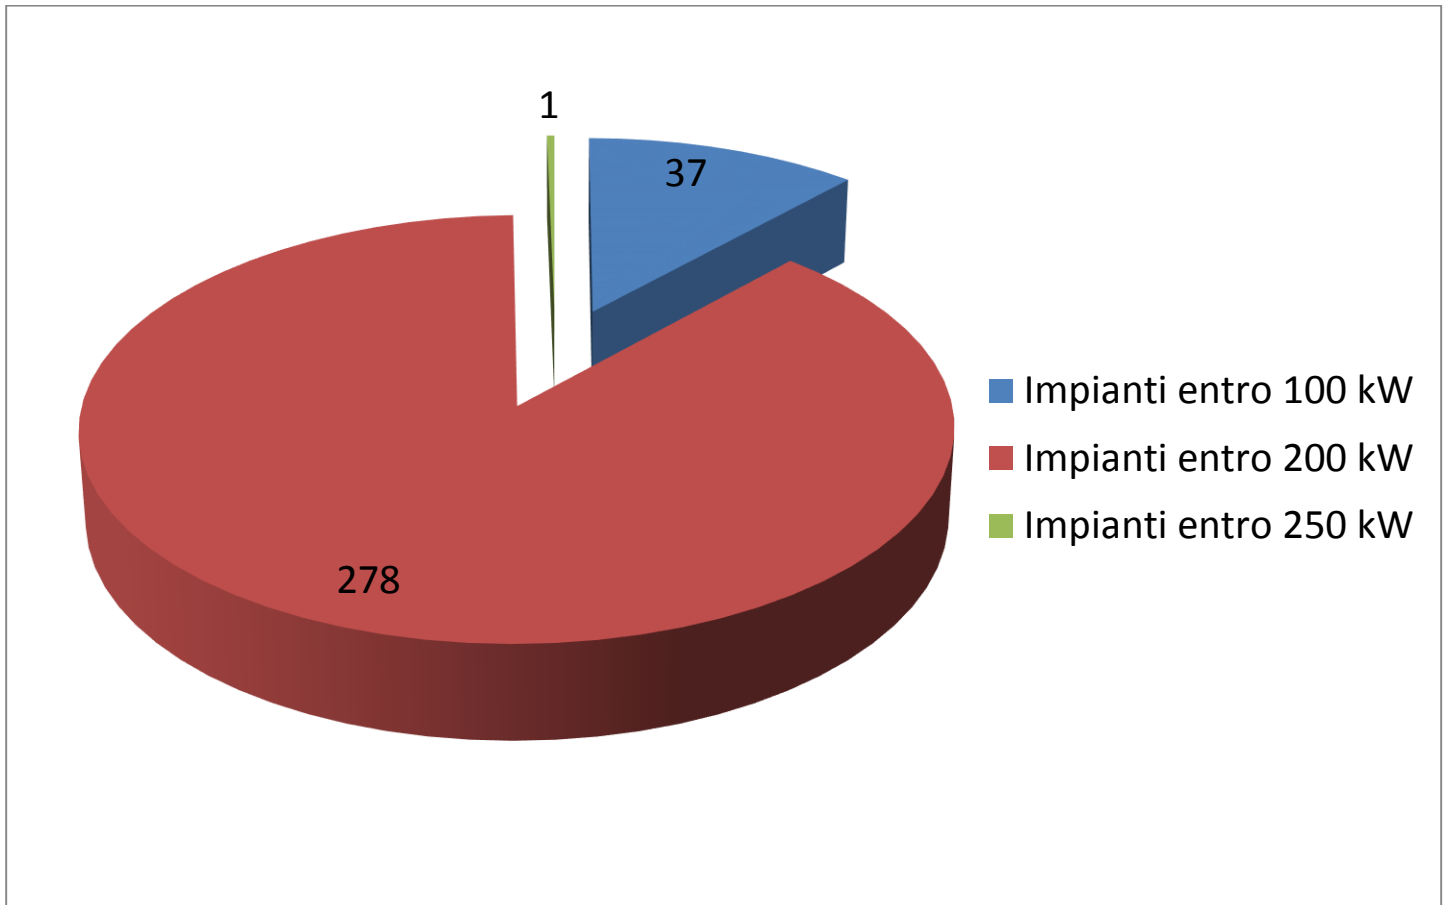

And even in this case, as already pointed out in the small wind report 2012, we realize that the Basilicata region certainly had an extraordinary boom of requests made by monopolizing all the registry and this is undoubtedly due to regional policies very favorable

ACCEPTED POWER DIVIDED BY CLASS OF POWER

Total Power 58.237 kW

ACCEPTED POWER DIVIDED BY CLASS OF POWER

Total Plants 316

ASSIEME
ASSOCIAZIONE ITALIANA ENERGIA MINI EOLICA
POWER DIVIDE BY REGIONS
